OVERVIEW

Frontend-focused software engineer with 8+ years building production React and TypeScript applications across betting, energy, healthcare, and e-commerce. Specializes in complex dashboards, real-time data features, and scalable state management (Redux, Zustand, Jotai). Focused on delivering reliable, production-grade software through meticulous testing, close team collaboration, and increasingly, AI-assisted engineering workflows and AI-powered product features (including a production OpenAI integration). Comfortable working across the stack with Node.js and GraphQL APIs.

WORK EXPERIENCE

Diplomat Tech

Jun. 2025 – Present

Web Developer

Mostar (on-sight)

- Developing and maintaining a high-traffic betting platform including live betting site and comprehensive back office system
- Spearheaded the implementation of testing infrastructure using Vitest, introducing quality assurance practices to a previously untested codebase
- Leading modernization efforts by refactoring legacy JavaScript code and gradually transitioning to TypeScript
- Successfully delivered a complex live player betting feature as a solo project, handling real-time data updates with minimal margin for error
- Introduced modern state management with Zustand and custom logging solutions to improve debugging and monitoring
- Collaborating with the team through in-person meetings and code reviews, contributing to knowledge sharing and best practices

Tech stack: **React, Zustand, Vitest, JavaScript (transitioning to TypeScript)**

Three60 Energy

Jul. 2023 – Apr. 2025

Web Developer

remote

- Researching and implementing new technologies for complex dashboards for tracking multiple wellbores for oil extraction and transport, renewable energy sources in general
- Developing and maintaining code, ensuring each component was created as a separate entity and thoroughly tested with Storybook with extreme usage of Mui/Joy library and Echarts
- Utilized Moon for monorepo dependency management across multiple projects
- Implemented Jotai and TanStack technologies for table and query (API call) management
- Integrated PostHog for analytics and OpenAI for chat functionalities
- Collaborated with backend development using Node.js, Elysia framework, and Drizzle ORM for database management
- Communication with customers regarding technology selection and product development

Tech stack: **React, Storybook, Typescript, Moon, Jotai, Mui/Joy, Echarts, Node.js, Elysia, Drizzle**

Q agency

Jul. 2021 – June. 2023

Web Developer

remote

- Led the Frontend team on a BYOD project, a virtual assistant, incorporating intricate calendar/schedule features
 - Successfully integrated the Mobiscroll library for React into our platform, optimizing user interface and functionality
- Managed a team of two junior developers on an UI/UX intense project, providing guidance and fostering collaboration
 - Collaborate closely with the UI/UX department to improve designs and ensure technical feasibility
- Maintained a legacy healthcare app, specializing in patient information gathering
 - Assisted the Backend team in implementing Node, GraphQL, and AWS S3 bucket functionalities
- Maintained consistent communication with the Project Manager, Backend team, and clients, ensuring efficient and timely delivery of features
- Developed and maintained the project skeleton utilized for initiating the new Frontend project

Tech stack: **React, React Query, Typescript, Node, GraphQL, AWS S3, Gitlab**

BlueHat

Jan. 2019 – Jul. 2021

Web Developer

remote (Doha - Qatar)

Led the development of a groundbreaking platform establishing smooth transactions between businesses and suppliers

- Designed and implemented a sophisticated Admin panel for our suppliers
- Developed a custom e-commerce shop showcasing supplier offerings, enhancing customer access to a diverse range of products
- Established and managed a robust deployment pipeline using GitHub Actions, ensuring efficient and reliable code releases
- Successfully maintained and improved a substantial amount of legacy code, ensuring the stability of a long-standing production system

Tech stack: **React, React Query, Styled component, GitHub, GitHub Actions, Socket.io, Google Maps**

Spark

Aug.2018 – Dec.2019

Full Stack Developer

Mostar (on-sight)

I played a pivotal role in developing a betting solution for the popular game CS:GO. My primary focus was on enhancing the system's efficiency by splitting the Backend into multiple services while communicating with each other in real time. In addition to my Backend responsibilities, I collaborated closely with the Frontend team, providing valuable assistance in designing software and user experience issues.

- Implemented real-time communication between Backend services over HTTP and sockets
- Focused on thread management to optimize queries for rapid bet calculations
- Gained significant agile skills

Tech stack: **Golang, Gitlab, Docker, CockroachDB, React Native, Socket.io, Firebase (notifications)**

LANGUAGES, SKILLS & INTERESTS

- **Languages:** Croatian (native), English
- **Skills:** React.js, Next.js, Node.js, Typescript, Redux, Storybook, MySQL, Prisma, Express, Jest (unit test), Socket.io, Electron.js, git, GitHub, CI/CD (GitHub actions, GitLab pipeline, Jenkins), Jira, Trello, Ability to analyze problems and design effective solutions, Troubleshooting, and Debugging skills
- **Interests:** Basketball, Gym/Fitness, Snowboarding, Traveling, Reading, *Board gaming, Seinfeld*
